

Scratch-to-Reveal Welcome Popup — Copy, Design & Build Spec

Prepared by: Neha Afreen (CRO & Retention) | For: Venkat (design), Payal (Shopify build) | 28 September 2026 | Status: **Proposal** — offer terms pending Reuben's approval (Section 5)

A gamified email-capture popup, inspired by the “try your luck” references. The visitor scratches a card, reveals 10% off, enters their email to claim it, and sees the code on screen while it is also emailed to them through the Klaviyo Welcome flow.

The one rule that shapes everything

Everyone gets the same prize, so we say so. The references read “see what you win,” which implies chance. If every scratch reveals 10%, presenting it as luck is a fake game — the same Integrity Rule as fake urgency — and in the US, anything that looks like a prize draw can pull in sweepstakes rules. We keep the fun of scratching and drop the pretence: “Scratch to reveal your welcome gift. Everyone gets one.”

How it works

1 · Scratch — after 10 seconds on the page, a full-screen overlay opens with a large blue scratch card. The visitor scratches (or taps) to reveal 10% off. **2 · Claim** — the email field appears under the revealed offer. **3 · Code** — on submit, the unique code shows on screen with a “Shop now, 10% applied” button, and the same code is sent by email.

1 · Scratch

Full screen, opens after 10 sec

2 · Claim

Card revealed, email field below

3 · Code

Code on screen + emailed

1 • Copy, screen by screen

Final wording. Venkat designs to it; Payal enters it into the popup app exactly as written.

Screen / element	Copy
Teaser tab (minimised, after close)	Scratch for 10% off
Screen 1 • Logo	somna. (white or navy logo file)
Headline	Scratch to reveal your welcome gift
Subhead	Everyone gets one. Scratch the card to see yours.
Scratch surface label	scratch here
Helper (under card)	Tap or drag to scratch.
Decline link	No thanks
Screen 2 • Revealed under the scratch	10% off your first order
Headline	You've unlocked 10% off
Subhead	Enter your email to claim it. We'll send your code straight to your inbox.
Email field placeholder	Email address
Button	Unlock my 10% off
Consent line (required, under button)	By signing up, you agree to receive marketing emails from somna. Unsubscribe anytime. Privacy Policy
Decline link	No thanks
Screen 3 • Headline	Your code is ready
Code box	[UNIQUE CODE] with a "Copy code" link → changes to "Copied" on tap
Button	Shop now, 10% applied
Small print	We've also sent it to your inbox. Valid on your first order for 7 days.
Error • invalid email	Enter a valid email address.
Error • already signed up	You're already on the list. Check your inbox for your welcome code.

Why "No thanks" and not "I'll pay full price": that style of decline shames the visitor, reads as a dark pattern, and doesn't fit the brand's calm tone.

The offer wording (10%, first order, 7 days) must match Welcome Email 1 word for word — Structure Standard Section 3, email capture rule.

2 · Design spec — for Venkat

Element	Spec
Mobile (design first, 390px)	Full-screen overlay , like the alice reference. Warm cream background (#F7F1E5) with a soft wavy checker pattern in a slightly darker cream (#F1EADB), subtle and low contrast so the card stands out. Content centred: somna. logo, headline, subhead, then a large scratch card (~300×190px) in the middle of the screen. Close × top-right in navy, not light grey (the reference × is nearly invisible), with a 44×44px tap area, plus a clear “No thanks” link at the bottom. A full-screen popup that is hard to close sends people off the site.
Desktop	Full-viewport overlay, split layout like the alice desktop reference: content and scratch card left on the cream checker background, image right. Image = real product photography (Strips + Tape pouches), cropped so no text on props shows (the “sleep deeper” tile must not appear).
Colours	Deep navy #14235C (text, buttons), royal blue #1F3FAF (scratch card), periwinkle #DCE4FB (accents), cream #F7F1E5 (background), white.
Type	Bold geometric sans for headline (matching the pouch “Strips.” lettering), clean sans for body. Body minimum 16px on mobile so iOS doesn't zoom the email field.
Scratch card	Royal blue rectangle, rounded 16px, with a soft drop shadow so it looks like a physical card (as in the reference), small periwinkle crescent moons and stars scattered like a night sky, and “scratch here” large in white, lowercase. A soft italic or cursive can echo the reference if it sits well with the brand type. Underneath (revealed): cream card, “10% off” in large navy, “your first order” below. Supply both layers as separate exports so Payal can build the scratch effect.
Buttons	Full width on mobile, navy fill, white text, 48px tall. One primary button per screen.
Teaser tab	Small rounded navy tab, bottom-left, “Scratch for 10% off”. Must not cover the sticky Add to Cart bar or the cart icon.
Motion	Subtle: overlay fades in; after reveal, card flips to show the email field. No confetti, no countdown timers, no shaking.
Deliverables	Mobile and desktop frames for Screens 1–3, both error states, the teaser tab, and scratch-card layers (top and reveal) as PNG/SVG.

3 · Build spec — for Payal

Item	Spec
Tool	A Shopify popup app with a scratch-card (or card-reveal) template and native Klaviyo integration. Please confirm the chosen app supports all three: scratch mechanic, Klaviyo list sync, and unique single-use codes.
Codes	Unique, single-use codes generated per signup (Klaviyo coupon synced to Shopify, or the app's own generator). Never one shared public code — it leaks to coupon sites within days. Settings: 10% off, first order only, one use per customer, expires 7 days after issue. Purchase-type setting per Section 5 decision.
Auto-apply	“Shop now, 10% applied” uses the Shopify discount link (/discount/CODE) so the code applies automatically. The cart drawer has no code field by design (Structure Standard Section 6), so auto-apply is essential. Email CTA uses the same link.
Trigger	Opens after 10 seconds on the page as a full-screen overlay. Desktop: also on exit intent if the visitor leaves before 10 seconds. Never on first paint. The delay plus an obvious close keeps it clear of Google's guidance against popups that block content the moment someone lands from search.
Where it shows	Homepage, collection and PDPs. Not on the Nasal Strips and Mouth Tape landing pages (paid traffic, one job, no distractions), checkout, cart, the account/subscription page, or policy pages.
Who sees it	Suppress for: anyone already on the Klaviyo list, logged-in customers, existing subscribers, and anyone arriving from a Klaviyo email link.
Frequency	Once per visitor. If closed, show the teaser tab for the rest of the session; don't reopen the full popup for 14 days.
Klaviyo	Signups go to the Newsletter list with source “Scratch Popup”. This triggers the Welcome flow; Email 1 sends the same code within 1 minute. Welcome flow is for non-purchasers only.
Accessibility	Scratch must also work as a single tap / keyboard Enter (not only drag). Focus moves into the popup on open; Esc closes it.
Tracking	Events for: popup view, scratch complete, email submit, code copied, “Shop now” click, code redeemed. Needed for the weekly readout.

QA before it goes live (SOP 11 · Section 2)

Check	Done
Tested on a real iPhone in Safari and on Android: opens at 10 seconds, full screen; scratch, tap-to-reveal, email field; close × and No thanks both work	
Popup does NOT appear on either landing page, checkout or the account page	
Test signup receives the Welcome email with the same code within 1 minute	
Code auto-applies from “Shop now” and from the email link; correct 10% shown at checkout	
Code fails on a second use and after 7 days; purchase-type rule behaves as decided	
Already-subscribed email shows the correct error message	
Teaser tab doesn't cover the sticky Add to Cart or the cart icon	

Baseline recorded before launch: email capture rate and sitewide CVR over a stated period	
---	--

4 · Where this sits in the funnel

The popup feeds the Welcome flow (manifesto → us-vs-them → what to start with → expiry push → plain-text close). The expiry push email must fire before day 7, when the code actually expires, and say the real date — a real deadline is fine; an invented one is not.

5 · Decisions needed before build — Reuben / Alan

Does the 10% stack on Subscribe & Save? Subscribe & Save is already 10% off, and the entry tier is where margin is thinnest. Contribution before ad spend, using COGS \$13.50 per bag and ~3% payment fees:

Order	Price paid	Contribution before CAC	vs CPA target ≤\$30
1 Bag · one-time, no code	\$50.00	~\$35.00	Covers target CPA
1 Bag · one-time, 10% code	\$45.00	~\$30.15	Just covers target CPA
1 Bag · subscribe, no code	\$45.00	~\$30.15	Just covers target CPA
1 Bag · subscribe + 10% code (stacked)	\$40.50	~\$25.80	Below target CPA — first order loses money
2 Bags · subscribe + 10% code (stacked)	\$71.10	~\$41.97	Covers target CPA

Options:

A · Stack on everything. Simplest message, highest conversion, but a 1-bag subscriber costs more to acquire than their first order earns; relies on retention to pay back.

B · One-time purchases only. Protects margin, but rewards customers for switching away from the default subscription — works against the retention goal (subscription revenue >25%).

C · Stacks, with a minimum order of \$70 (i.e. the 2-bag / 2-set tier and up). Keeps the subscription default, pushes buyers to the tier that also earns the free Sleep Guides, and every qualifying order clears the CPA target. The copy would change to “10% off orders over \$70”.

My recommendation: Option C. It weighs conversion, revenue and margin together — the code still gives a real reason to buy today, but it nudges toward the 2-month tier we already default to instead of discounting our least profitable order. If approved, Screen 2 and 3 copy updates to “10% off orders over \$70” and the Welcome email must match.

Other confirmations: code expiry of 7 days (matches the Welcome flow timing); whether the “free gifts with subscription” sticker and this 10% code can combine; and sign-off per SOP 11 Section 6 because this changes pricing presented to customers — record approver and date in the task.
